

Eyebrow Tattoo Aftercare

The first 7 - 10 days are the most critical to your healing and it is super important that you undertake ALL the below steps and instructions.

Please ensure that your hands are clean before coming into contact with your tattoo throughout the entire healing process - handwashing is a must!

You will be provided with a special ointment to aid in hydration during the healing process.

3 hours after:

Three hours after your appointment you need to gently clean your eyebrows to remove any excess fluid or blood from the area. This can be done by using a water wipe. (With clean hands!)

Your brows will then dry heal for 48 hours. This means no product needs to be applied during this period although, the area must still be cleaned.

48 hours after:

After 48 hours, with clean fingers or a Q-TIP, using only half-a-pea size, you need to gently apply the ointment onto the area. The ointment should be applied once every morning and once every night for 7 days. (However, if you have oily skin, please apply the ointment once a day for 7 days.)

If using fingers, please warm the product between your two pointer fingers and to press and roll the product across your brows. No smearing!

Your brows will take 7-10 days to fully appear once peeling has finished. The colour under the skin will at this point appear lighter and possibly a little bit pink in comparison to the skin that is peeling off. This is completely normal as the skin is in its re-modelling phase. At this point, you will have a light pink layer of fresh new skin that can often alter how the pigment actually looks.

It typically takes 6-8 weeks before the true colour of the Tattoo appears.

Please follow these instructions:

- Do not go into high exposure sun during the healing process.
- Do not let water come into contact with the tattoo for long periods of time. (The brows cannot be soaking)
- Do not use any makeup, creams or exfoliants on the tattoo for 2 weeks.
- Do not go into saunas or pools.
- Do not get any massages, facials, or skin treatments during the healing process.
- Do not use any cosmetics with retinol acids, salicylic or AHA's for 30 days after the appointment.
- Do not use laser light therapy - this can lighten, darken and distort the pigment.
- Do not scratch, pick wiggle or move the tattoo until it has healed.

You are able to clean the area daily using a fragrance-free baby wipe/makeup wipe/water wipe or damp cotton wool.

To protect your tattoo, you should apply sunblock from 4 weeks post-procedure, as sun exposure will cause the tattoo to fade and change colour more rapidly.

If you have any questions or concerns, please don't hesitate to reach out to us!

I can't wait for you to see the amazing results!
